Everything Fishy has been servicing ponds for 11 years now, and from about 2005 on, wishing for a product that could be applied to existing concrete, mortar, limestone or other leaching stone on pond perimeters and the interior of ponds that would block the leaching without destroying the beauty. It was a pleasure to discover X-3. Mike patiently explained the process, application rates, dry time in different temperatures, that has made our application of X-3 an outstanding success.

We've had no losses of livestock due to using the product, and have beautified several ponds. Just being able to see the fish is a miracle with a concrete pond in Texas, between the bright sunlight and the leaching lime! We have a list of happy customers that were thrilled to discover their beautiful stonework remained beautiful after the product was applied, and their pond maintenance due to algae growth was greatly reduced by X-3.

Thanks Stone Technologies!
